

Microbiological Quality Control / Quality Assurance Products

1.

2.

3.

Well designed with the user in mind.

- Easy handling & pre-sterilized
- Filter cup easily removes to become a petri dish
- Pre-loaded with high quality membrane and pad
- Lid has built in magnifying lens
- Reliable, reproducible results unit-to-unit & lot-to-lot.

Common microbiological analysis applications:

- Potable water
- Beer & wine
- Oils, extracts and broths
- Waste water
- Dairy & Juices

4.

6.

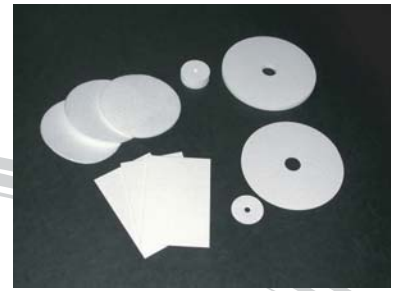

5.

**Simple, efficient work flow
with established methods.**

1. Pour into monitor
2. Filter sample under vacuum
3. Choose appropriate growth media
4. Apply growth media
5. Remove monitor from vacuum manifold
6. Apply cover and incubate

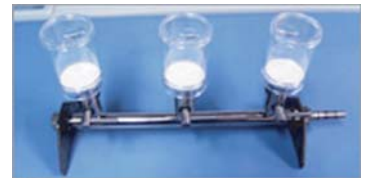

A full line of high quality, competitively priced products for your quality control / quality assurance lab.

Extraction thimbles

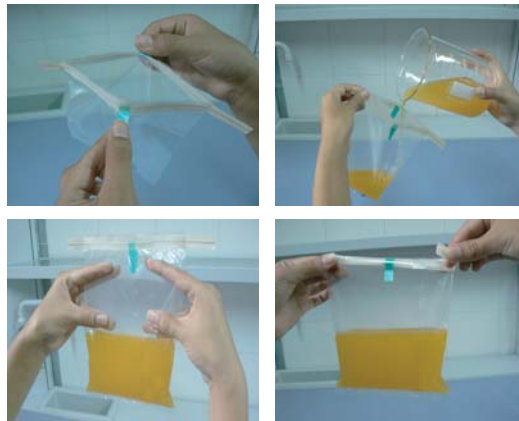

Vacuum manifolds

Microbiological Monitors

Sample bags & Homogenizer bags

Growth media

Sampling devices

Contact dishes

Syringe filters

Our products are manufactured to the highest standards and industry proven to meet or exceed the requirements of established QA/QC standard test methods.
